Siphonic Roof Drainage System

LORO-DRAINJET® Siphonic Roof Drainage System - emergency drain

emergency drainage

siphonic drainage

Silent-Power

LORO-DRAINJET® siphonic drainage systems conform to DIN EN 1253. They are roof drainages with optimized fluid dynamics and a high discharge rate, improved flow characteristics and an enhanced sound behavior. LORO-DRAINJET® emergency drains, the use of which is mandatory according to DIN 1986-100 in siphonic action operated drainage systems, these drains in combination with a most diverse pipe and pipe fitting program represent a complete roof drainage system that satisfies the highest demands. With DN 100 system, the drainage performance of the emergency drainage at up to 38 l / s and 75 mm water height on the roof.

Advantages:

- DN 70 and DN 100
- single and two part units
- drainage performance
DN 70: 17,0 l/s
DN 100: 38,0 l/s
- at 75 mm water height

... optimal drainage with maximum safety!
