

1.1

LORO-X Scupper-Roof drainage system with silent-gravity-flow that complies to german roof drainage standards (4,5 l/s)

main drainage

gravity drainage

Silent

Europa-Patent

LORO-X Scupper-roofdrainage system with gravity-flow optimized for quietness complies to the german roof drainage standards (DIN EN 1253) for roof drains. This standard postulates a flow of 4,5 l/s with a water height from 35mm on the roof.

This great capacity can be reached with the LORO-X patent for the 2-times lowered horizontal pipe, which accelerates the water to run around the attica.

With the silent-gravity-flow it can be installed on private residences, office-buildings or even hospitals.

Advantages:

- 4,5 l/s at 35mm water height
- Silent-gravity flow
- Patented lowered horizontal pipe
- Easy installation in the attica
