

LORO Flat Roof Drains for Gravity Drainage

LORO flat roof drains with connecting collar, series O DN 100 - DN 125, aluminium, plastic-coated. DN 70, hot-dip galvanised steel with additional coating. Vertical/horizontal drainage, with/without thermal insulation, with/without heating.

LORO-DRAINLET® Stainless steel flat roof drains in accordance with DIN EN 1253 with clamping flange, available in series DL with/without thermal insulation, with/without heating.

LORO-DRAINLET® flat roof drains are aerodynamically optimised roof drains with increased drainage performance, improved flow characteristics, reduced installation dimensions and better acoustic behaviour. With a capacity of up to 10 l/s, these drains are among those with the highest drainage capacities anywhere. LORO-DRAINLET® flat roof drains are also available as emergency drains.

Particular advantages:

- High drainage capacity
- Easy assembly
- Increased corrosion protection
- UV-resistant
- Small recesses
- Lightweight
- Can be drained during the installation phase
