

# Flat-Roof- and Industry-Roof Outside-Drainage with LORO-X Attica-Roof Drainage Systems

From pitched Roofs with Gutters and downpipe outside the building, it is state of the art to keep the rainwater completely outside the building.

The same basic principle can be realized for Flat-Roof-Drainage with LORO-X (Siphonic-) Scupper-Roofdrainage-Systems: Without a breaking through the roof, LORO-X Scupper-Roof drainage-Systems drain completely outside the building! The slope of the roof can be simply planed towards the attica.

Through innovative LORO-patents for Main- and Emergency-Drainage with gravity-flow and siphonic-action! Alternatively you can drain your building with LORO-X Drainjet Roofdrainage-Systems further on inside the building.
