LORO[®]

LORO-X BOX

the head-discharge curve secure roof drainage systems to take away

Main drainage	Emergency drainage
Gravity flow	Siphonic flow

- ★ powerful siphonic flow
- ★ no calculation necessary
- ★ LX-specification sheet in every Box

LORO-X BOX Scupper-Roof drainage systems

Advantages of the 6 Star optimization

★ safe:

LX-specification sheet for the defined system shape with LORO-X head-discharge curve in every LORO-X BOX.

★ strong:

Pressure resistant, unbreakable, shockproof, backlock secure, resistant against weather and UV-radiation. LORO-X Systems are the proper decision for every flat roof drainage in front of the facade.

★ silent:

The patented LORO-X Suction hat smoothes the flow and makes a quiet absorption of the rainwater possible. With the pipes outside the building, you will not hear any flowing inside the building.

★ swiftly:

With powerful siphonic flow the water can be pulled from the roof through the parapet. The easy to install LORO-X push-fit socket makes the installation as fast as possible.

★ roomsaving:

No breaks through the roof, not pipes inside the building, less drainage points with stronger flow. With the small diameters, it is possible to hide the downpipe behind the facade.

★ moneysaving:

Small diameters and less downpipes save money for the material. Easy to plan and nstall complete systems save time and money during planning and installation.

Complete LORO-X Scupper roof drainage system

...with proof of performance

The draft connection between downpipe and drain allows a controlled suction of the water from the roof into the ground pipe. The rainwater is collected on the roof into the LORO-X roof drain with the patented suction hat and from the drain into the downpipe. This draft connection can only occur in a complete system. Drain and downpipe belong together like a horse and a cart. The stronger the controlled draft connection is, the more water can be pulled from the roof.

With every LORO-X BOX you get all the parts regarding to the system that are necessary to develop the desired draft connection and to reach the power that is shown in the LORO-X head-discharge curve.

Ready to build in, to take away.

In addition to the LORO-X BOX you only need the LORO-X downpipe that can be ordered very easy with the order-form that is included in every LORO-X BOX. The specification sheet for every system with the related LORO-X head-discharge curve is also included in every LORO-X BOX.
