

LORO-X roof drainage systems
Fully single-sourced

"Entrepreneurialism is having commercially-promising ideas, finding the people and resources to put them into practice and using them to conquer the market in the long-term."
Karl Heinz Vahlbrauk: Founder of the LOROWERK

Since it was founded in 1954 and now in its 4th generation, LORO depends on a coherent vision of a company, its employees and its products, embedded within a challenging commercial environment. At the LOROWERK site in Bad Gandersheim, research, development, production, sales and service work hand-in-hand.

On-going research and development is the basis for new technologies and products. Consideration of the system form of the complete (roof) drainage system is essential for reliable system performance. LORO, as a developer and producer of outlets, pipes and fittings, is able to supply the customer with reliable full-systems with guaranteed proof of performance.

Numerous European patents and active collaboration in various standardisation committees underlines the expertise of LORO, along with TÜV certification of the LOROWERK quality management system.

Reliability, quality and technological expertise at the highest level has made the "family firm of LORO" a trusted partner for all rainwater drainage issues for designers, architects, contractors and construction industry partners for over 50 years.

Floor-, flat roof-and balcony drains, waste water pipes, steel fittings

LORO quality management

For over 50 years LORO has stood for top quality and reliability drainage for buildings and ships. LORO designs, produces and supplies single-sourced high-quality drainage systems.

LORO undergoes regular voluntary external inspections for documentation of these high standards. For example the TÜV certificate acc. to DIN EN ISO 9001 documents the internal quality management system and is valid for all departments of the company.

Furthermore LORO has a wide range of products certified and checked to particularly high standards by independent testing organisations for construction and shipbuilding.

Safety, quality and innovation out of tradition

LORO has been developing innovations and new system solutions for the market for decades.

LORO therefore supports designers and installers with innovative and economic solutions, important design aids and high-quality, easy-to-process materials.

New ideas are developed and brought to market-readiness in the research and development department.

Existing products are optimised through continuous improvement to the needs of our customers.
