

**LORO-RAINSTAR®  
Attic Rainwater Drainage**

LORO-RAINSTAR® attic roof drains are further developments of LORO-DRAINLET®/DRAINJET® attic drains. The range has also been extended to include attic emergency drains. The aerodynamically optimised design of the new drains improves drainage capacity to up to 24 l/s.

The new patented attic drains are manufactured from hot-dip galvanised steel, have an additional internal coating, with stainless steel strainer/cowl. They comply with DIN EN 1253 and DIN 18195. LORO-RAINSTAR® attic drains are supplied as a complete drainage system together with LORO rainwater down pipes and fittings.
